Symbols glossary

| | | |
|--|---|---|
|  | Heavy duty cast iron pan stands: for maximum stability and strength. |  |
|  | Installation in column: Installation in column |  |
|  | With the switch on this symbol, no heating is possible even if the thermostat is turned. |  |
|  | Ever Clean Enamel: Ever Clean enamel is applied electrostatically, corner to corner and edge to edge to prevent cracking or cracks over time. It is a particular pyrolytic enamel, resistant to acids which, in addition to being pleasantly bright, promotes greater cleaning of the oven walls, thanks to its lower porosity. It is baked at over 850 ° C and slowly polymerized at a scientifically determined rate to ensure uniform depth and strength. Ever Clean enamel creates an impeccable finish both on the inside of the oven and on the trays, making the surfaces of the oven incredibly easy to maintain over time as it reduces the adhesion of fat during cooking |  |
|  | Fan assisted base: the mix of fan and lower heating element alone allows to finish cooking foods already cooked on the surface but not internally more quickly. This system is recommended to finish cooking foods that are already well cooked on the surface, but not internally, which therefore require a moderate higher heat. Ideal for any type of food. |  |
|  | Static: Traditional cooking suitable for the preparation of one dish at a time. The fan is not active and the heat comes from below and from above at the same time. Static cooking is slower and more delicate, ideal in order to get well cooked and dry dishes even inside. Ideal for cooking all types of roasts, fatty meats, bread, filled cakes. |  |
|  | Circulaire: it is the perfect function for cooking all types of dishes in a more delicate way. The heat comes from the back of the oven and is distributed quickly and evenly. The fan is active. It is also ideal for cooking on multiple levels without mixing smells and flavors. |  |
| | | |

| | | | |
|--|---|---|---|
|  | Grill: Very intense heat coming only from above from a double heating element. The fan is not active. Provides excellent grilling and gratinating results. Used at the end of cooking, it gives a uniform browning to dishes. |  | Half grill: For rapid cooking and browning of foods. Best results can be obtained by using the top shelf for small items, the lower shelves for larger ones, such as chops or sausages. For half grill heat is generated only at the centre of the element, so is ideal for smaller quantities. |
|  | Fan grill: very intense heat coming only from above from a double heating element. The fan is active. It allows the optimal grilling of thickest meats. Ideal for large cuts of meat. |  | All glass inner door: All glass inner door, a single flat surface which is simple to keep clean. |
|  | The inner door glass: can be removed with a few quick movements for cleaning. |  | Side lights: Two opposing side lights increase visibility inside the oven. |
|  | Automatic opening: some models have Automatic opening door when the cycle is finished which is a perfect solution for handle-less kitchen units as no handle is needed. For safety reasons, the door locks automatically when the machine is in use to avoid it being opened inadvertently. |  | The oven cavity has 5 different cooking levels. |
|  | Telescopic rails: allow you to pull out the dish and check it without having to remove it from the oven entirely. |  | Ultra rapid burners: Powerful ultra rapid burners offer up to 5kw of power. |
|  | Vapor Clean: a simple cleaning function using steam to loosen deposits in the oven cavity. |  | The capacity indicates the amount of usable space in the oven cavity in litres. |
|  | 4.3 inch display with LED technology, usability with knobs + 3 touch keys |  | Knobs control |
