The automatic defrost system works by automatically defrosting at regular intervals eliminating the need to defrost altogether.

Economical mode: Analyzes fridge functioning during the activation and optimizes the operating cycle in order to reduce power consumption.

Power saving mode: The power saving mode allows you to disable the refrigerator and keep the freezer working.

Smeg's evolution towards more intelligent and eco-friendly models has led to the choice of Inverter technology, which significantly reduces consumption.

Child lock: some models are fitted with a device to lock the programme/cycle so it cannot be accidentally changed.

Fast freezing: The fast freezing function brings the temperature of the compartment down when activated a few hours prior to usage.

LED interior lighting: is a more energy efficient and long lasting way of illuminating the interior of the appliance.

Air plus: keeps food fresher for longer.
