## Symbols glossary

- |  |   |   |  |
|--|---|---|--|
|    | The Chef function alternates compression and decompression cycles and speeds up some operations, such as marinade or infusion, that otherwise would require a lot of time.  |    | Vacuümszakken. Deze zakken zijn bestand tegen temperaturen van -25 ° C tot 70 ° C (gedurende 2 uur) of 100 ° C (gedurende 15 minuten). Geschikt voor voorraadkasten, koelkasten en vriezers, ze kunnen niet worden gebruikt voor vacuüm koken. |
|    | The vacuum in bag function guarantees to create vacuum into bags choosing among three levels. It is also possible to set the 0 level to seal the bag without creating the vacuum.   |    | The stabilization device maintains the drawer open when used, avoiding closing it accidentally.  |
|    | Sous-vide cooking bags. These bags endure a maximum temperature of 85°C (for 75 hours), 100°C (for 4 hours) or 121°C (for 30 minutes). Suitable for pantry and refrigerator storage, they cannot be storage in the freezer. |    | The vacuum in container function guarantees to create vacuum into glass or plastic containers choosing among three different levels. Use only certificate containers suitable for vacuum and able to resist to a 99,9% vacuum.                 |
|    | Setting the highest vacuum in bag/container level, it is reached a 99,9% vacuum.  |    | The vacuum sensor guarantees the achievement of the maximum vacuum connected to the level set. If the value is not reached, the bag is not sealed.   |
|  | The machine can be set at three different sealing levels. Setting the maximum level is possible to seal more bags at the same time with a unique cycle.   |  | The machine carries out a double phase welding which guarantees to seal dirty and oily bags as well.   |
