Symbols glossary (TT)

Heavy duty cast iron pan stands: for maximum stability and strength.

Quadruple glazed: Number of glazed doors.

Fingerprint proof stainless steel: Fingerprint proof stainless steel keeps stainless steel looking as good as new.

Fan with upper and lower elements: The elements combined with the fan aim to provide more uniform heat, a similar method to conventional cooking, so pre-heat is required. Most suitable for items requiring slow cooking methods.

Circulaire: The combination of the fan and circular element around it gives a hot air cooking method. This provides many benefits including no preheat if cook time is more than 20 minutes, no flavour transfer when cooking different foods at the same time, less energy, and shorter cook times. Good for all types of food.

Grill element: Using of grill gives excellent results when cooking meat of medium and small portions, especially when combined with a rotisserie (where possible). Also ideal for cooking sausages and bacon.

Fan with grill element: The fan reduces the fierce heat from the grill, providing an excellent method of grilling various foods, chops, steaks, sausages etc. giving even browning and heat distribution, without drying out the food. The top two levels recommended for use, and the lower part of the oven can be used to keep items warm at the same time, an excellent facility when cooking a grilled breakfast. Half grill (centre portion only) is ideal for small quantities of food.

All glass inner door: All glass inner door, a single flat surface which is simple to keep clean.

Side lights: Two opposing side lights increase visibility inside the oven.

Air cooling system: to ensure a safe surface temperatures.

Enamel interior: The enamel interior of all Smeg ovens have a special antacid lining which helps keep the interior clean by reducing the amount of cooking grease adhering to it.

Circogas: In gas ovens the fan distributes the heat quickly and evenly throughout the oven cavity, avoiding flavour transfer when cooking a number of different dishes at the same time. In electric ovens this combination completes cooking more quickly of foods that are ready on the surface, but that require more cooking inside, without further browning.

Upper and lower element only: a traditional cooking method best suited for single items located in the centre of the oven. the top pf the oven will always be hottest. Ideal for roast, fruit cakes, bread etc.

ECO: The combination of the grill, fan and lower element is particularly suitable for cooking small quantities of food.

Half grill: For rapid cooking and browning of foods. Best results can be obtained by using the top shelf for small items, the lower shelves for larger ones, such as chops or sausages. For half grill heat is generated only at the centre of the element, so is ideal for smaller quantities.

Circulaire with upper and lower elements: The use of the fan with both elements allows food to be cooked quickly and effectively, ideal for large joints that require thorough cooking. It offers a similar result to rotisserie, moving the heat around the food, instead of moving the food itself, enabling any size or shape to be cooked.

The inner door glass: can be removed with a few quick movements for cleaning.

Pyrolytic: Pyrolytic cleaning cycles can be selected as necessary to automatically clean the oven interior.

The oven cavity has 5 different cooking levels.

Telescopic rails: allow you to pull out the dish and check it without having to remove it from the oven entirely.

Ultra rapid burners: Powerful ultra rapid burners offer up to 5kw of power.

The capacity indicates the amount of usable space in the oven cavity in litres.
