## Symbols glossary

	Aquatest measures the clarity of the water during an auto program, and automatically ensures the minimum consumption of water and energy.		Energy efficiency class C
	Delay Timer: The delay timer can postpone the start of the program by up to 24 hours.		This option provides special care for a delicate load. It prevents rapid changes in the wash temperature of the selected programme and reduces it to 4
	Noise Level: Excellent insulation and special devices keep noise to a minimum.		Orbital wash system distributes water evenly throughout the 60cm dishwasher cavity, directing water with precision to ensure an excellent wash.
	Eco: Eco, this economic wash programme uses a low amount of water and energy in order to provide the most environmentally friendly cleaning option.		Normal programme: The normal programme is suitable for normal degrees of dirt for everyday use.
	Soak programme: The soak programme provides a rinse to prevent dirt from drying.		The symbols show the number of plate settings of the dishwasher.
	Total Acquastop: In addition to the partial Acquastop protection present in all Smeg dishwashers, some models have an electronic device fitted to the water intake hose, which monitors water levels in the machine, detects leaks in the hose and switches off the water supply immediately when necessary.		...
	Quick wash cycle for normally soiled mixed loads such as dishes and pans, even with dried-on residues. Dishes are washed and dried in 60 minutes.		Wash cycle for normally soiled mixed loads such as dishes and pans, even with dried-on residues. When this program is selected, the dishwasher recognises the type of dirt and automatically adjusts the washing parameters as appropriate.
	Programme suitable for washing and drying heavily soiled items with encrusted residues.		Option which improves the washing results of the selected programme. It increases the wash temperature and duration.
	Option which provides better cleaning results by keeping the temperature between 65 and 70°C for at least 10 minutes during the last rinsing phase.		The work aimed at continuous improvement has allowed the creation of the second generation of the Inverter motor 2.0, characterised by greater efficiency and durability over time, which allows very high performance and a lower energy consumption and noise level.
