## Symbols glossary

	The Aquatest sensor is an electronic sensor that measures the degree of water transparency at the end of the initial soaking phase. Based on the values measured, the sensor sets the most suitable programme, thus obtaining the best washing results with the minimum amount of water.		Installation in column: Installation in column
	Delay Timer: Option to postpone the start of the desired programme by up to 24 hours in order to programme the dishwasher to run at the desired time.		FlexiZone: The ½ load flexizone allows you to wash a reduced load saving energy, water and time and there are no restrictions on where the items are placed.
	Hyclean: When the HYCLEAN option is selected, the dishwasher performs a final 10 minute rinse at a high temperature of 70°C, eliminating virtually all bacteria to achieve the highest possible standards of cleanliness. The Hyclean option can be selected with almost all cycles at temperatures above 50°C.		Smeg's evolution towards more intelligent and eco-friendly models has led to the choice of Inverter technology, which significantly reduces consumption.
	Noise Level: Excellent insulation and special devices keep noise to a minimum.		Delicate: Delicate washing program is designed for delicate dishes which are not heavily soiled.
	Delicate: Delicate washing program is designed for delicate dishes which are not heavily soiled.		PRG_RINSE_72dpi
	PRG_STRONG_72dpi		15 place settings: Number of place settings.
	EXTRA DRY This option adds a hot rinse cycle that ensures improved drying.		The Regular programme is for dishes with regular dirt, even with dried-on residues.
	LIGHT SOILING Washing programme with low water and energy consumption.
