Symbols glossary

The automatic defrost system works by automatically defrosting at regular intervals eliminating the need to defrost altogether.

Economical mode: Analyzes fridge functioning during the activation and optimizes the operating cycle in order to reduce power consumption.

Fast freezing: The fast freezing function brings the temperature of the compartment down when activated a few hours prior to usage.

Smeg's evolution towards more intelligent and eco-friendly models has led to the choice of Inverter technology, which significantly reduces consumption.

No Frost: The No Frost and Frost free systems prevent ice from forming so that no defrosting is required.

LED display: to show programmes, functions and options selected and the time to the end of the cycle.

Ventilated: Forced distribution of cold air in the refrigerator compartment, which allows even temperature distribution within the fridge.

LED interior lighting: is a more energy efficient and long lasting way of illuminating the interior of the appliance.

Multiflow Cooling System: the Multiflow ventilation system allows an even distribution of cool air around the fridge cabinet.
