It is a particular pyrolytic enamel, resistant to acids which, in addition to being pleasantly bright, promotes greater cleaning of the oven walls, thanks to its lower porosity. It is baked at over 850 °C and slowly polymerized at a scientifically determined rate to ensure uniform depth and strength Ever Clean enamel creates an impeccable finish both on the inside of the oven and on the trays, making the surfaces of the oven incredibly easy to maintain over time as it reduces the adhesion of fat during cooking
	Crisper: The simultaneous operation of the microwave, grill and crisper plate (once pre-heated) allows the food to go crispy and golden, ideal for cooking Pizza etc		Grill: Very intense heat coming only from above from a double heating element.
