# Symbols glossary

Ō	Automatic merge of zones for a bigger area	O	Permanent auto pot detection
P	Power booster: option allows the zone to work at full power when very intense cooking is necessary.	$\delta$	Child lock: some models are fitted with a device to lock the programme/cycle so it cannot be accidentally changed.
9	The slider control panel allows you to adjust the power simply by passing your finger across the touch device.	/ <sup>48</sup> 56	CUT_OUT_STANDARD_72dpi
BOOST	Additional maximum power level for a better energy consumption	ECO HEAT ==_	Eco-Heat: this function warns when the zone is still hot after being switched off. As well as ensuring maximum safety by preventing burns, this also allows you to make use of residual heat to continue cooking or keep foods hot.
į	Grill function	<u>"</u>	Keep warm function: Keep warm function keeps the cooked food heated. In this mode the heating zone operates at a minimum capacity for 120 minutes and then turns off automatically.
STOP °C∓	Overheat protection: The safety system that automatically turns off the hob in case of overheating of the control unit.		Induction: The work of these hobs is based on the principle of electromagnetic induction. The heat is generated directly in the bottom of the pan during its contact with the hob.
‡Ö	Multizone: allows several pans to be used at once, large or small, offering freedom of placement and greater flexibility		Overfill protection: The special overfill protection shuts down the stove in the presence of overflow of liquids.
9cm min	Min diameter pot detection of 9 cm	(1)	PAUSE_72dpi
IN ECO logic advance	Possibility to set the maximum power absorbion of the hob	1 P 14 10 15 5	Quick selection, with one touch cooking begins at the highest level, then automatically reduces after time. Ideal for dishes that require quick boiling and then continued cooking without constant control (eg beef broth).
4	Quick Start function: the chosen temperature is reached faster. The heating element works at maximum power until the right temperature is reached.	Н	Indication of residual heat: After the glass ceramic hob is switched off the residual heat indicator shows which of the heating zones still remains hot. When the temperature drops below 60 ° C, the indicator goes out.

Timer: All ceramic hobs have a timer which

automatically ends cooking after a preset time.

Time elapsed: shows how long the cooking zone

has been in use.
