Symbols glossary

A smart infrared system, which allows a hood and hob with this feature to work together.

Child lock: some models are fitted with a device to lock the programme/cycle so it cannot be accidentally changed.

The slider control panel allows you to adjust the power simply by passing your finger across the touch device.

Eco-Off: This energy-saving function shuts the zone down before the timer sounds, making use of the residual heat in the pan.

Induction: The work of these hobs is based on the principle of electromagnetic induction. The heat is generated directly in the bottom of the pan during its contact with the hob.

Overfill protection: The special overfill protection shuts down the stove in the presence of overflow of liquids.

Quick selection, with one touch cooking begins at the highest level, then automatically reduces after time. Ideal for dishes that require quick boiling and then continued cooking without constant control (eg beef broth).

Timer: All ceramic hobs have a timer which automatically ends cooking after a preset time.

Power booster: option allows the zone to work at full power when very intense cooking is necessary.

Premium individual Slider control for each zone

Eco-Heat: this function warns when the zone is still hot after being switched off. As well as ensuring maximum safety by preventing burns, this also allows you to make use of residual heat to continue cooking or keep foods hot.

Overheat protection: The safety system that automatically turns off the hob in case of overheating of the control unit.

Multizone: allows several pans to be used at once, large or small, offering freedom of placement and greater flexibility

Possibility to set the maximum power absorbion of the hob.

Time elapsed: shows how long the cooking zone has been in use.
