Terminal box

6 poles Plug Not present

Compatible Accessories

SCRP

Non-scratch hob scraper - suitable for induction and ceramic hobs

TPK

Stainless steel grill plate to cook Teppanyaki dishes

Symbols glossary

Permanent auto pot detection

Child lock: some models are fitted with a device to lock the programme/cycle so it cannot be accidentally changed.

CUT_OUT_STANDARD_72dpi

This function allows you to keep cooked food warm without burner it

Induction: The work of these hobs is based on the principle of electromagnetic induction. The heat is generated directly in the bottom of the pan during its contact with the hob.

Quick selection, with one touch cooking begins at the highest level, then automatically reduces after time. Ideal for dishes that require quick boiling and then continued cooking without constant control (eg beef broth).

Time elapsed: shows how long the cooking zone has been in use.

Min diameter pot detection of 7 cm

Power booster: option allows the zone to work at full power when very intense cooking is necessary.

The slider control panel allows you to adjust the power simply by passing your finger across the touch device.

Additional maximum power level for a better energy consumption

Overheat protection: The safety system that automatically turns off the hob in case of overheating of the control unit.

All cooking zones can be reduced to the minimum power level, so the hob can be left unattended for a short period without food overcooking or burning. Then just press again this function, the previously set power levels can be reactivated.

Indication of residual heat: After the glass ceramic hob is switched off the residual heat indicator shows which of the heating zones still remains hot. When the temperature drops below 60 ° C, the indicator goes out.

Timer: All ceramic hobs have a timer which automatically ends cooking after a preset time.

Possibility to set the maximum power absorbion of the hob
