# Symbols glossary

Permanent auto pot detection

Sommige modellen zijn voorzien van een functie om het programma/de cyclus te blokkeren zodat het niet per ongeluk kan aangepast worden.

The slider control panel allows you to adjust the power simply by passing your finger across the touch device.

Grill functie

Overheat protection: The safety system that automatically turns off the hob in case of overheating of the control unit.

Multizone: maakt het mogelijk meerdere pannen tegelijk te gebruiken, groot of klein, voor meer plaatsingsvrijheid en meer flexibiliteit

Min diameter pot detection of 9 cm.

Quick selection, with one touch cooking begins at the highest level, then automatically reduces after time. Ideal for dishes that require quick boiling and then continued cooking without constant control (eg beef broth).

Indication of residual heat: After the glass ceramic hob is switched off the residual heat indicator shows which of the heating zones still remains hot. When the temperature drops below 60 ° C, the indicator goes out.

Timer: All ceramic hobs have a timer which automatically ends cooking after a preset time.

Possibility to set the maximum power absorbion of the hob.

Power booster: option allows the zone to work at full power when very intense cooking is necessary.

Evolution Slider totally Back-lighted ghost effect

Darkness becomes light

This function allows you to keep cooked food warm without burner it

Induction: The work of these hobs is based on the principle of electromagnetic induction. The heat is generated directly in the bottom of the pan during its contact with the hob.

Overfill protection: The special overfill protection shuts down the stove in the presence of overflow of liquids.

All cooking zones can be reduced to the minimum power level, so the hob can be left unattended for a short period without food overcooking or burning. Then just press again this function, the previously set power levels can be reactivated.

Quick Start function: the chosen temperature is reached faster. The heating element works at maximum power until the right temperature is reached.

Time elapsed: shows how long the cooking zone has been in use.
